PROFESSIONAL SUMMARY

Data Scientist skilled in ML, NLP, and Generative AI, building and deploying production-ready models to deliver data-driven solutions with high accuracy and impact.

EDUCATION

- Galgotias University, Greater Noida 2021 - 2025
B.Tech. CSE (Data Science)
- Father Agnel School, Greater Noida 2019 - 2021
Intermediate (CBSE)

TECHNICAL SKILLS

Python, R, SQL, NumPy, Pandas, Scikit-learn, TensorFlow, PyTorch, Hugging Face, OpenCV, Tableau, Power BI, Flask, React, FastAPI, Django, Docker, Git, AWS, GCP | Machine Learning, Deep Learning, NLP, Computer Vision, Data Preprocessing, Model Evaluation, Statistical Analysis, Data Visualization, MLOps, LLM Fine-Tuning, Prompt Engineering

WORK EXPERIENCE

Data Science Intern

Hindustan Times Media (Shine) | April 2025 – October 2025

- Transitioned from three separate models to a unified BERT-based multi-level categorization model (L1: Industry, L2: Department, L3: Job title), leveraging cosine similarity for embedding-based label optimization.
- Led data preprocessing, embedding generation, and hierarchical categorization pipeline development to streamline model workflows.
- Fine-tuned transformer models, achieving 89% categorization accuracy, validated across multiple datasets.
- Improved resume-job matching relevance, significantly reducing noise in automated recommendations.
- Developed a Resume Parser Classifier using DistilBERT, chunking resumes into Work Experience, Education, and Personal Details with 87% accuracy, enabling structured data extraction for HR systems.
- Built an NER models for extracting Education, Work Experience, and Personal Details, achieving 84% accuracy, and directly enhanced the company's CV parser.
- Designed interactive testing tools for all models and deployed them as production-ready APIs using FastAPI, ensuring scalability, reliability, and seamless integration into Shine's recruitment platform.
- Delivered end-to-end production-grade ML solutions, automating recruitment workflows, improving HR screening efficiency, and reducing manual parsing effort
- Developed a Query Model using all-MiniLM-L6-v2, integrated with Docker and PostgreSQL for semantic search across resume-job datasets. Applied a 50% similarity threshold to filter relevant matches and improve retrieval accuracy. Deployed the complete pipeline using FastAPI (backend) and React (frontend) for production use.

Data Analytics Intern (Alteryx Automation)

AICTE | Jul 2024–Sep 2024

- Automated data workflows using Alteryx, reducing manual effort by 30%.
- Delivered actionable insights from large datasets to support decision-making.

PROJECTS

[AISocial Media Agent](#)

Streamlit | *OpenAI GPT* | *YouTube API* | *Python* | *NLP*

- Built a Streamlit app to generate LinkedIn, Instagram, and Twitter posts from YouTube transcripts using GPT.
- Used youtube transcript api for transcript extraction and OpenAI API for content generation.
- Added custom prompts, multi-platform output, content download, and script-based version with .env support.

[Chat Analyzer Using NLP](#)

Python | *Scikit-learn* | *NLP* | *Sentiment Analysis* | *Topic Modeling*

- Developed an NLP tool to categorize user interactions, achieving 85% accuracy in topic detection and sentiment classification.
- Impact: Improved user engagement by optimizing response strategies based on chat patterns.
